

A One-Stop Precast Solution Provider

The Indian construction industry has seen rapid influx and adaptation of various technologies over the last couple of decades. Prefabricated building construction is one of the fastest growing among them. Malar Energy & Infrastructure has firmly established as one of the leading precast solutions provider in the country. The company has become synonymous with quality prefabricated building construction and has taken rapid strides on the back of its commitment to provide quality products and services in the field.

Malar Energy & Infrastructure is led by the dynamic RR.Gopaljee, a visionary technocrat, who is the founder-director of the company. Hailing from one of the reputed media family in Tamil Nadu, RR.Gopaljee has been instrumental in guiding the company's successfully, while adhering to the company's core values of transparency, strict adherence to quality standards & statutory norms and ethical business practices. An organized thinker with brilliant business acumen, he is known for his innovative approach that has made Malar Energy & Infrastructure, a top name in the field of prefabricated buildings, in a relatively short span of time.

The company's current production capacity is 25000 sq.ft of slab per day,

50000 sq.ft of wall panel per day, column, beam and staircase can be produced as per requirement. In short the company is capable of producing precast and prestressed concrete elements for 30000 sq.ft built up area per day.

Malar Energy & Infrastructure produces a range of precast concrete products in a controlled factory environment, using the latest technology, ensuring consistent quality and precision. The company's range of products include:

- Precast Form Slab

- Wall Panels
- Stairs & Landing
- Columns & Beams
- Full Precast Building Systems
- Infra structure Elements (Road Barrier, Drain, Manholes, Tanks, Trenches etc)

Apart from its product offerings, Malar Energy & Infrastructure offers a wide range of services. These include:

Sales & Technical Support

The company offers industry-leading sales and technical support with a dedi-

cated team, which provides guidance at every stage of a project, from concept to completion. By working with our customers and delivering practical support right from the earliest planning and design stages, we can help specify the most appropriate solution. The result is that our customers benefit from cost-savings and reduced construction time by avoiding commercial and technical issues before they arise.

Design, Planning & Project Management

The company also offers specialized design, planning and project management consultancy services. The company's in-

house team works in close association with the consultants of the clients. This helps its customers achieve more effective designs and enable cost savings, minimize construction schedules and ensure that the original concepts are translated into reality in the completed buildings.

Manufacturing & Delivery

The company's extensive experience in manufacturing precast concrete products allows it to save, at every stage, the client's resources, time and costs. A strong supply chain ensures competitive prices and a high level of service. Once the products are ready for delivery, they are placed

in the stockyard so that they arrive on-site in the sequence that they will be required for erection. This systematic process eliminates double-handling of the products, thereby saving precious time.

Installation & On Site Support

Malar Energy & Infrastructure's experienced erection crew provides hands on support, deploying their expertise and knowledge in implementation of any construction project, in the most efficient way.

Strong Quality Focus

A strong quality focus has been one of the key cornerstones of the company's success story. The company has established a Quality Management System in line with ISO 9001:2008 standard requirements. The company has its own in-house design team, production and erection crew and modern machinery and equipment to carry out the work complying with stringent quality standards.

The quality control process is monitored by an experienced QA/QC team comprising of QA/QC Managers and Engineers, at different stages of execution of work, such as design & drawings, materials, reinforcement fabrication & fixing, concrete demoulding, storage & transport and erection. ♦
